**Subject: 2015 Semi-Annual Report – RWQCB Order No. 00-046  
Former Oyster Point Landfill/Current Oyster Point Marina and Park  
South San Francisco, CA**

Dear Mr. Pal:

On behalf of the City of South San Francisco, CSS Environmental Services, Inc. (CSS) is pleased to submit this 2015 Semi-Annual Report for the former Oyster Point Landfill and current Oyster Point Marina and Park. Please call me if you have any questions at (415) 883-6203.

Sincerely,  
**CSS Environmental Services, Inc.**

## **1.0 INTRODUCTION**

The Oyster Point Landfill is a closed, unlined Class III landfill located along the San Francisco Bay in the City of South San Francisco (City) (Figure 1). The City owns the landfill. The majority of the landfill is open space, but a portion of the landfill has been developed and includes a public marina, boat launch, a ferry terminal, a small yacht club, a boat sales building, and a small office and hotel complex (Figure 2). The San Mateo Harbor District (Harbor District) operates the public marina on the landfill and is responsible for general maintenance of the marina and public spaces.

The landfill is regulated by the Regional Water Quality Control Board (RWQCB) under Order No. 00-046 issued on June 21, 2000 (Order). The Order imposes closure and post-closure requirements on the City as part of future development. This 2015 Semi-Annual Monitoring Report was prepared in compliance with Provisions 3 and 4 of the Order.

The primary purpose of this report is to document compliance with the requirements of the Order. It presents the results of water quality monitoring, landfill gas monitoring, stormwater monitoring and site inspections completed to date for the period January through June 2015. Leachate and groundwater monitoring was conducted per the November 2000 Water Quality Monitoring Plan (WQMP) as amended in August 2001 (Addendum 1) and as amended by the July 2004 Maximum Allowable Concentrations Limits (MACL's) report. The WQMP and MACL's reports describe the water quality monitoring program for the landfill. Additional inspection and sampling requirements are also included in the following documents:

- September 2000 Storm Water Pollution Prevention Plan (SWPPP) and Storm Water Monitoring Plan (SWMP) as amended in August 2001 (Addendum 1)
- September 2000 Final Closure and Post-Closure Maintenance Plan (FCPMP)
- Emergency Response Contingency Plan (ERCP)

This report is organized as follows:

- Section 2 describes landfill monitoring, inspection, maintenance, and development activities since the last reporting period.
- Section 3 summarizes the water quality monitoring programs in place at the site.
- Section 4 presents the results of water quality and landfill gas monitoring to date.
- Section 5 summarizes the results of site inspections and describes proposed maintenance activities.
- Section 6 provides a list of references.
- Appendix A includes laboratory analytical data sheets for the period January through June 2015.
- Appendix B presents historical analytical data, including parameters no longer included in the monitoring program.
- Appendix C includes a copy of the Annual Storm Water Monitoring Report for the site, dated June 30, 2015.

## 2.0 LANDFILL ACTIVITIES SINCE LAST REPORTING PERIOD

The 2014 Annual Report (CSS Environmental Services Inc, January 31, 2015) summarized activities completed between January and December 2014. This current report includes activities completed at the former landfill from January through June 2015.

### *2.1 Leachate and Groundwater Quality Monitoring*

There are 18 monitoring wells included in the post-closure monitoring program. The monitoring program is described in detail in Section 3. The program includes both groundwater and elevation monitoring and water quality sampling.

Groundwater and leachate elevations are monitored quarterly. Elevations were measured on March 17, and June 22, 2015. The analytical program is as specified in the November 2000 WQMP as amended in August 2001, and amended by the MACL's report. This program varies from the prescriptive list of analytcs included in the Order.

Groundwater and leachate samples were collected from select wells on June 22-23, 2015. The samples were analyzed by TestAmerica, in Pleasanton, California. Laboratory analytical data sheets for the first semi-annual groundwater monitoring event are included in Appendix A.

### *2.2 Landfill Gas Perimeter Monitoring*

There are a total of 10 landfill gas monitoring wells installed along Oyster Point Boulevard and Gull Drive (LFG-1 through 10) and three remedial venting systems (PVT-1, PVT-2, and PVW-1), as shown on Figure 3. During the current reporting period, quarterly landfill gas monitoring was performed at the monitoring wells on March 11 and June 23, 2015. Historical landfill gas monitoring results are presented in Tables 5 and 6.

In 2007 passive venting trench PVT-1 was installed near LFG-9, and passive venting trench PVT-2 and venting well PVW-1 were installed near LFG-3 to remediate elevated methane concentrations in their vicinity. Between September 2007 and October 2008 intensive monitoring was performed on LFG-3 to evaluate the performance of the venting system and methane concentrations declined to less than 5% for the last 6 months of monthly monitoring, leading the City to revert to quarterly sampling of LFG-3 as described in correspondence to the SMCHSA, the CIWMB and the RWQCB from the City of South San Francisco on September 30, 2008. During 2010 landfill gas concentrations in excess of 5% were found twice: during the first quarter a concentration of 7.7% was found in LFG-9 near passive venting trench PVT-1 and during the second quarter a concentration of 6.0% was found in LFG-3. Methane concentrations subsequently declined to below the regulatory limit of 5% methane in all perimeter monitoring wells. During the second quarter of 2011, methane again was found at an elevated concentration of 5.5% in LFG-9. Of the remaining perimeter wells that could be sampled all were below 5% methane. During the third quarter of 2011, the City installed passive wind turbines at the exhaust of both of the PVT-1 and PVT-2 venting trenches to encourage landfill gas venting. Methane concentrations again declined to below the regulatory limit of 5% methane in all perimeter

monitoring wells during the third and fourth quarters of 2011, all of 2012, as well as the first quarter of 2013. During the second quarter of 2013 the methane concentration at LFG-3 was again above 5% but has since declined to non-detect.

At the request of the SMCHSA, an off-site groundwater monitoring well, MW-5, was added to the landfill gas monitoring program during the fourth quarter of 2011 and consistently has above 5% methane. A maximum reading of 20.8% methane was found in MW-5 during the second quarter of 2013. This well, shown on Figure 3 as Alexandria Well MW-5, well belongs to an undeveloped property (560 Eccles Ave) owned by Alexandria Real Estate and/or Gull Avenue LLC adjoining the former Oyster Point Landfill. The well is located within the City of South San Francisco's Gull Drive easement, about 5-feet west of the curb of Gull Drive. It was installed along with four other groundwater monitoring wells by Environ for Alexandria in 2008 to monitor conditions at a former burn dump (not the former Oyster Point Landfill) and therefore the City considers that any landfill gases therein are likely to be associated with that former land use. During the first quarter of 2014, well MW-5 was found to have a methane concentration of 14.2% and subsequently CSS installed a passive wind turbine here which successfully abated the methane concentration at the well to below 5%.

The SMCHSA recently requested information regarding structure sensors in the buildings. In February 2015, CSS personnel canvassed buildings at Oyster Point and found that all of the buildings inspected were equipped with methane sensors. Those under the control of the San Mateo County Harbor District; the Harbormaster's office, maintenance building and the free-standing restrooms, have operating sensors that are inspected and maintained monthly by Harbor District personnel. During the first half of 2015 the Harbor District reported that no sensor alarms were triggered in these buildings. Other buildings have sensors that do not appear to be maintained. As of the date of this report, CSS and the City of South San Francisco are in the process of restoring building sensors to operating conditions in the remaining buildings.

### ***2.3 Site Inspections and Storm Water Sampling Completed***

Landfill inspections, per the Storm Water Pollution Prevention Plan, were conducted throughout the year, as required beginning in January 2007. The results from the first half of 2015 are included in the Storm Water 2014-2015 Annual Report, submitted in June 2015 to the RWQCB; a copy is attached in Appendix C without the accompanying laboratory reports found in the original submittal.

### ***2.4 Landfill Maintenance***

The Harbor District and/or the City implemented the following maintenance projects in the first half of 2015:

- Maintained vegetation to control potential erosion in a previously un-vegetated area: several hundred square feet alongside the paved walking path of the southeastern shoreline.

## ***2.5 Reports/Documents Submitted***

The following reports were submitted in the first half of 2015:

- 2014 Annual Report, Oyster Point Landfill, dated January 2015
- First Quarter 2015 Landfill Gas Monitoring Report, dated May 2015. Submittal of the Second Quarter 2015 Landfill Gas Monitoring Report is pending.
- 2014-2015 Annual Storm Water Report, dated June 2015
- Stormwater Pollution Prevention Plan (for California Industrial General Permit Order 2014-0057-DWQ), June 2015

## ***2.6 Landfill Development***

As originally described in the 2005 Annual Report, the Oyster Point Landfill was identified by the WETA as a primary site for establishment of a public ferry terminal. The WETA completed its construction during the first quarter of 2012 and the new ferry terminal is in operation. Construction activities by the WETA included waterside dredging of the East Basin Marina Area to accommodate the ferry boat service and demolition of two of the existing piers; and waterside construction of a new ferry terminal and dock. Landside improvements to the East Basin Parking Area included a bus stop and turnaround.

The City has included the Former Oyster Point Landfill in its redevelopment zone and hopes to redevelop the site. Under the first phase of redevelopment the City plans call for a maximum of 600,000 square feet of office/R&D space, envisioned as a biotech campus, and possibly a retail/restaurant building, in the area currently occupied by the existing commercial development at the eastern side of the Site. Phase I will include the reconfiguration of Marina Boulevard and a portion of Oyster Point Boulevard and a shuttle turn-around will be constructed adjacent to the Ferry Terminal. Parcels to the east of the new development will be graded and improved as sports fields. Further east a future hotel and retail complex is considered. The existing Yacht Club structure and the Harbor District maintenance building would remain. The project would include excavation of landfill materials at the former Oyster Point Landfill and relocation of these materials on- and/or off-site. The landfill cap will be upgraded to meet the current requirements of Title 27 of the California Code of Regulations with the approval of the RWQCB and San Mateo County Environmental Health Division. Future phases of development appear to be outside of the landfill area.

The project description included below was approved by the City in March of 2011:

“Oyster Point Redevelopment Project, including a General Plan Amendment, Redevelopment Plan Amendment, Zoning Text Amendment (Specific Plan), Rezone (Zoning Map Amendment), Precise Plan, Design Review, Sign Program, Development Agreement, Disposition and Development Agreement, and Environmental Impact Report to allow the demolition of various existing improvements and the construction of a new office and research and development campus at a 1.25 FAR, road alignment, utilities, park, open space, marina improvements (i.e. parking areas), Bay Trail improvements and public restrooms on approximately 82 acres of property located at the eastern end of Oyster Point Boulevard and adjacent to the Oyster Point

Marina, in accordance with SSFMC Title 19, and Chapters 20.040, 20.110, 20.230, 20.300, 20.310, 20.360, 20.400, 20.450, 20.460, 20.480, 20.530, 20.540, and 20.550.”

The City does not anticipate any construction of the project in the next year.

### **2.7 Activities Planned During Next Reporting Period**

Planned activities next reporting period include continued SWPPP monitoring under the new SWPPP prepared for the recently revised California Industrial General Permit, and the collection of quarterly water levels, quarterly landfill gas perimeter monitoring data and semi-annual groundwater samples.

The Harbor District and/or the City will continue to maintain vegetation to control potential erosion in a previously un-vegetated area: several hundred square feet alongside the paved walking path of the southeastern shoreline.

### 3.0 OVERVIEW OF WATER QUALITY MONITORING PROGRAMS

#### 3.1 Detection Monitoring Program

The purpose of the detection monitoring program is to detect "measurably significant" leachate migration from the waste-bearing unit into surrounding media, including underlying soil and groundwater and nearby surface water. Components of the detection monitoring program include:

- Detection monitoring network
- Points of compliance
- Contaminants of concern and monitoring parameters
- Procedures for data evaluation

The detection monitoring network consists of monitoring points, which include monitoring wells and surface water sampling locations. Points of compliance are monitoring locations where leachate migration from the unit would likely be discovered, and to which numerical concentration limits (MACLs) are applied. There are a total of 18 monitoring wells currently installed at the landfill, as shown on Figure 4. Table 1 summarizes the construction details of the wells and identifies the lithologic units the wells monitor.

The MACLs Report dated June 2004 evaluated the water quality data collected since monitoring began in 2000 and recommended modifications to the detection monitoring program. Those modifications include a revised set of monitoring parameters and monitoring frequency. The revised detection monitoring program is summarized in Table 2. The MACLs report was submitted to the RWQCB in July 2004. The program was implemented beginning in the last quarter of 2004 following notification of the RWQCB.

The program includes: quarterly water elevation monitoring for all wells installed at the landfill; annual sampling of water quality in 5 leachate wells (GW-1a, GW-3a, GW-10a, GW-12a, and GW-13a); and semi-annual water quality monitoring of perimeter monitoring wells (GW-2b, GW-4a, GW-5a, GW-6a, GW-7a, GW-11a, GW-14a, GW-15a, and GW-16a). Water elevation data for all wells installed at the site are included in Table 3. Water quality data are summarized in Table 4. Historical data, including analytical parameters no longer included in the monitoring program, are included in Appendix B.

#### 3.2 Storm Water Monitoring Program

The SWPPP establishes a monitoring program to eliminate unauthorized non-storm water discharges and reduce runoff carrying pollutants to the bay. The SWMP has included chemical analysis of storm water samples for parameters established in the general permit for industrial discharges, in addition to select metals associated with maritime uses, and volatile organic (VOC) and semi-volatile organic (SVOC) compounds. The 2003-2004 Annual Storm Water Report recommended modifications to the SWMP to eliminate VOCs and SVOCs from the analytical suite since these compounds had not been detected in storm water from the previous

two sampling events. The revised SWMP was implemented during the 2004-2005 monitoring year, and continued to be in use through the 2014-2015 storm season. As of July 1, 2015, the new California Industrial General Permit Order 2014-0057-DWQ is in effect. The City has submitted and is implementing a new SWPPP in compliance with the new permit order. A highlight of the new SWPPP monitoring program is that four storm events will be sampled for the 2015-2016 storm season. Previously only two storm events were sampled annually.

### ***3.3 Post-Closure Maintenance and Emergency Response Monitoring Program***

The FCPMP stipulates semi-annual inspection of the landfill cover and inspection following a seismic or large storm event. Routine inspections of the landfill cover for evidence of erosion are completed as part of SWPPP compliance. Emergency inspections are completed on an as-needed basis.

Post-closure inspections are conducted to assess the following:

- Differential settlement
- Erosion of the landfill cover
- Presence of burrowing animals
- Drainage ditches and underground storm drains
- Vegetative health
- Structural integrity

The results of post-closure and emergency inspections are reported as required by the Order and as part of the annual Storm Water Reports. The most recent maintenance inspection was conducted on May 21, 2015.

## 4.0 WATER QUALITY AND LANDFILL GAS PERIMETER MONITORING RESULTS

### 4.1 Detection Monitoring Program

Leachate and groundwater elevations have been collected since 1999. Water quality data are summarized in Table 4. Historical data, including analytical parameters no longer included in the monitoring program, are included in Appendix B. Measured elevations are summarized in Table 3. The March 17, 2015 water level elevations are contoured on Figure 5. Hydrographs for each well are presented in Figures 6a to 6r. Based on regression analysis, the 2004 MACLs report documented a small, yet consistent long-term water level rise in most wells. That trend appears to be continuing.

The landfill monitoring wells were originally installed in 1999. In February 2003 and again in July 2007 and June 2013 the reference point elevation of each well was re-surveyed to document the magnitude of on-going subsidence of the landfill. The amount of settlement varied across the site from 0.00 to 0.53 feet from 1999 to 2003. The reference point elevations of each of the monitoring wells were again re-surveyed on July 2 and 3, 2007. Settlement from 2003 to 2007 varied from 0.00 to 0.67 feet. These were re-surveyed again on June 6 and June 12, 2013 and settlement from 2007 to 2013 varied from 0.00 to 0.94 feet. The hydrographs presented in Figures 6a to 6r show the calculated water level elevations using the 1999, 2007 and 2013 survey data, with monitoring well reference point elevations interpolated between survey events.

The long-term groundwater and leachate levels were re-evaluated and compared to the rates documented in the MACLs report. The data in Table 3 and hydrographs presented in Figures 6a through 6r indicate that long-term water level trends through June of 2015 are generally stable or rising slightly in most wells with an average rise of 0.00005 feet per year. The rate of water level rise generally varies between 0.00001 to 0.00040 feet per year on average. Exceptions are wells GW-2b, GW-5a, GW-13a and GW-16a which have a slight declining trend in groundwater elevation ranging from 0.00001 and 0.00020 feet per year. Monitoring well GW-8c, the westernmost well monitoring the upgradient bedrock zone, has seen the largest water level rise at 0.0004 feet per year, on average.

Groundwater from the 9 perimeter compliance wells and 5 interior wells was sampled on June 22-23, 2015. TestAmerica completed the chemical analyses. The laboratory analytical results are summarized in Table 4. Laboratory analytical data sheets and chain-of-custody records for the second quarter sampling event are included in Appendix A. The results are similar to that detected in previous sampling events. Points of compliance include wells: GW-2b, GW-4a, GW-5a, GW-6a, GW-7a, GW-11a, GW-14a, GW-15a and GW-16a. All results in these wells are below MACL criteria outlined below.

Parameters	MACL	Source
Benzene	71 ug/l	USEPA California Toxics Rule Criteria (May 2000), Order 99-045
Ethyl benzene	86 ug/l	Order 99-045
Chlorobenzene	129 ug/l	USEPA Recommended Ambient Water Quality Criteria
Naphthalene	470 ug/l	Order 99-045
Total Xylenes	2,200 ug/l	Order 99-045

Review of the laboratory reports indicates that all groundwater samples were analyzed within respective hold times and that laboratory quality assurance/quality control analyses (surrogate recoveries, matrix spike recoveries and spike duplicates) were within acceptable ranges. Quality assurance trip and equipment blank samples were analyzed and target analytes were not detected.

#### ***4.2 Storm Water Monitoring Program***

Storm water samples collected and inspection reports for the 2014-2015 rainy season are reported in the 2014-2015 Annual Storm Water Report, dated June 2015. A copy, without the attached analytical laboratory reports included in the original submittal, may be found in Appendix C. Storm water inspection and sample results for the 2015-2016 rainy season will be summarized in the 2015-2016 Annual Storm Water Report, due in June 2016.

#### ***4.3 Landfill Gas Perimeter Monitoring Program***

There are a total of 10 landfill gas monitoring wells installed along Oyster Point Boulevard and Gull Drive (LFG-1 through 10) and three remedial passive venting systems (PVT-1, PVT-2, and PVW-1), as shown on Figure 3. Quarterly landfill gas monitoring was performed at the monitoring wells on March 11 and June 23, 2015 and these results as well as quarterly monitoring conducted to date are included in Table 5.

In 2007 passive venting trench PVT-1 was installed near LFG-9, and passive venting trench PVT-2 and venting well PVW-1 were installed near LFG-3 to remediate elevated methane concentrations in their vicinity. Between September 2007 and October 2008 intensive monitoring was performed to evaluate the performance of the PVT-2 venting system. The passive venting trench was successful at abating methane to below 5% in LFG-3 as summarized in Table 6. The City reverted to quarterly sampling of LFG-3 as described in correspondence to the SMCHSA, the CIWMB and the RWQCB from the City of South San Francisco on September 30, 2008. Sporadic detections of elevated methane concentrations have been found in recent years at perimeter wells LFG-3 and LFG-9 especially during periods of high water table. During 2010 landfill gas concentrations in excess of 5% were found twice: during the first quarter a concentration of 7.7% was found in LFG-9 near passive venting trench PVT-1 and during the second quarter a concentration of 6.0% was found in LFG-3. Methane concentrations subsequently declined to below the regulatory limit of 5% methane (see Table 5). During the first and second quarters of 2011, methane again was found at elevated concentrations of 7.4% and 5.2% in LFG-9. During the first and second quarters of 2011, methane again was found at elevated concentrations of 7.4% and 5.2% in LFG-9. In response, passive wind turbines were

installed during the third quarter 2011 at the exhaust of both venting trenches PVT-1 and PVT-2 to encourage landfill gas abatement. Methane concentrations again declined to below the regulatory limit of 5% methane in all perimeter monitoring wells through the first quarter 2013 monitoring. During the second quarter of 2013 the methane concentration at LFG-3 was again above 5% but has since declined to and there were no elevated methane concentrations in perimeter monitoring wells during the first half of 2015.

At the request of the SMCHSA, an off-site groundwater monitoring well, MW-5, was added to the landfill gas monitoring program during the fourth quarter of 2011 and consistently had above 5% methane. A maximum reading of 20.8% methane was found in MW-5 during the second quarter of 2013. This well, shown on Figure 3 as Alexandria Well MW-5, well belongs to an undeveloped property (560 Eccles Ave) owned by Alexandria Real Estate and/or Gull Avenue LLC adjoining the former Oyster Point Landfill. The well is located within the City of South San Francisco's Gull Drive easement, about 5-feet west of the curb of Gull Drive. It was installed along with four other groundwater monitoring wells by Environ for Alexandria in 2008 to monitor conditions at a former burn dump (not the former Oyster Point Landfill) and therefore the City considers that any landfill gases therein are likely to be associated with that former land use. During the first quarter of 2014, well MW-5 was found to have a methane concentration of 14.2% and subsequently CSS installed a passive wind turbine here which successfully abated the methane concentration at the well to below 5%.

#### ***4.4 Proposed Modifications to the Monitoring Programs***

At the request of the SMCHSA, an off-site groundwater monitoring well, MW-5, was added to the landfill gas monitoring program during the fourth quarter of 2011 and was found to contain 12% methane. MW-5 continued to show elevated methane concentrations up to 20.8% during subsequent monitoring events. This well, shown on Figure 3 as Alexandria Well MW-5, belongs to an undeveloped property (560 Eccles Ave) owned by Alexandria Real Estate and/or Gull Avenue LLC adjoining the former Oyster Point Landfill. The well is located within the City of South San Francisco's Gull Drive easement, about 5-feet west of the curb of Gull Drive. It was installed along with four other groundwater monitoring wells by Environ for Alexandria in 2008 to monitor conditions at a former burn dump (not the former Oyster Point Landfill) and therefore the City considers that any landfill gases therein are likely to be associated with that former land use. During the first quarter of 2014 CSS installed a passive wind turbine at MW-5 which has successfully abated the methane concentration at the well to below 5%.

## **5.0 LANDFILL MAINTENANCE**

### ***5.1 Storm Water Pollution Prevention Inspections***

Site inspections per the requirements of the SWPPP were conducted as required over the current reporting period. Inspection reports and stormwater sampling results for the period of July 1, 2014 through June 30, 2015 are reported in the 2014-2015 Annual Storm Water Report, dated June 2015. A copy may be found in Appendix C.

### ***5.2 Post-Closure Maintenance Plan and Emergency Response Monitoring Program***

Semi-annual inspections required as part of the FCPMP are conducted concurrent with inspections performed as part of the SWPPP.

Table 1  
Monitoring Well Construction Summary  
Oyster Point Landfill  
South San Francisco, CA

Well Designation	Screened Lithology	Borehole Depth (feet bgs)	Bottom Seal Interval (feet bgs)	Screened Interval (feet bgs)	Sandpack Interval (feet bgs)	Sanitary Seal Interval (feet bgs)
GW-1a	waste	25	na	15-25	14-25	13-14
GW-2b	alluvium	140	131-140	116-131	114.5-131	112-114.5
GW-3a	waste	40	25-40	15-25	14-25	13-14
GW-4a	reworked clayey silt	16	na	6-16	5-16	4-5
GW-5a	reworked clayey silt	34.5	20-34.5	10-20	9-20	8-9
GW-6a	waste/reworked clayey silt	25	na	15-25	14-25	13-14
GW-7a	grael fill	16	13.5-16	5.5-13.5	4.5-13.5	3.5-4.5
GW-8c	bedrock	50	45-50	35-45	32-45	30-32
GW-9a	gravelly clay	26	na	21-26	20-26	19-20
GW-10a	waste	39.5	37-39.5	22-37	20-37	18-20
GW-11a	waste/reworked clayey silt	15	na	5-15	4-15	3-4
GW-12a	waste	35.5	34-35.5	23-33	21-34	19-21
GW-13a	waste	30	26-30	15-25	14-26	12-14
GW-14a	waste	15	40162.0	4-12	3.5-12	2-3.5
GW-15a	waste/reworked clayey silt/clayey gravel	20	18-20	7-17	6.5-18	4-6.5
GW-16a	silty sand	19.5	10.5-19.5	5-10	4.5-10.5	2.5-4.5
GW-17a	waste	31.5	26-31.5	40111.0	40051.0	39972.0
MW-5*	waste/reworked clayey dilt	20	na	16-20	15-20	nr

Notes:

feet bgs = feet below ground surface

na= not applicable (base of well is bottom of vorehole)

Both bottom seal and sanitary seal composed of bentonite

\* well MW-5 installec by Applied Consultants in 1989

nr=not reported in well log

Table 2  
 Summary of Detection Monitoring Program  
 Oyster Point Landfill  
 South San Francisco, CA

Well Designation	Unit Monitred	Monitoring Frequency	Parameters
GW-1a	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-3a	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-10A	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-12A	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-13A	Waste	Annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-2B	Underlying Sand	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-4A	Perimeter berm	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-5A	Perimeter berm	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-6A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-7A	Adjacent earth fill	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-11A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-14A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-15A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes
GW-16A	Perimeter berm and waste	Semi-annual	Benzene, Ethylbenzene, Chlorobenzene, Naphthalene, Total Xylenes

**Note:** Water Levels will be measured quarterly in these wells

**Table 3  
Groundwater and Leachate Elevation  
Former Oyster Point Landfill  
South San Francisco, California**

Well Design	Date Measured	Screened Lithology	Original TOC Elevation (ft. MLLW)	Depth to Groundwater (feet)	Original GW Elevation (ft. MLLW)	TOC Elevation			Adjusted TOC Elevations (ft. MLLW)	New GW Elevations (ft. MLLW)
						on 2/21/2003 (ft. MLLW)	on 7/3/2007 (ft. MLLW)	on 6/12/2013 (ft. MLLW)

<b>July 2004 MACL's</b>		<b>71</b>	<b>86</b>	<b>2,200</b>	<b>129</b>	<b>470</b>

**Notes:**

ug/L = Micrograms per liter

< = Compound not detected at or above the stated laboratory reporting limit

Samples analyzed by EPA Test Method 8260

MACL's - Maximum Allowable Concentrations Limits

\* = Carbon disulfide was detected at a concentration of 14 micrograms per liter.

\*\* = Carbon disulfide was detected at a concentration of 2.1 micrograms per liter.

\*\*\* = Acetone was detected at a concentration of 54 micrograms per liter.

(1) = Naphthalene was reported four days past the seven day hold time for unpreserved VOAs due to a naphthalene concentration in excess of the instrument's calibration range, which required a dilution

TestAmerica Job ID: 720-65644-1

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: CSS Environmental Services Inc  
Project/Site: Oyster Pt. Landfill-6551

TestAmerica Job ID: 720-65644-1

---

**Job ID: 720-65644-1**

---

**Laboratory: TestAmerica Pleasanton**

---

**Narrative**

---

**Job Narrative  
720-65644-1**

**Comments**

No additional comments.

**Receipt**

The samples were received on 6/24/2015 3:49 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 3.0° C.

**GC/MS VOA**

Method 8260B: The following samples were collected in properly preserved vials for analysis of volatile organic compounds (VOCs). However, the pH was outside the required criteria when verified by the laboratory : GW-2B (720-65644-1), GW-5A (720-65644-3), GW-6A (720-65644-4), GW-11A (720-65644-6), GW-15A (720-65644-8), GW-16A (720-65644-9), (720-65593-B-1), (720-65593-B-1 MS) and (720-65593-B-1 MSD).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

# Detection Summary

## Login Sample Receipt Checklist

Client: CSS Environmental Services Inc

Job Number: 720-65644-1

**Login Number: 65644**

**List Source: TestAmerica Pleasanton**

**List Number: 1**

**Creator: Gonzales, Justinn**

Question	Answer	Comment
Radioactivity wasn't checked or is <=/ background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

State of California  
STATE WATER RESOURCES CONTROL BOARD

2014-2015  
**ANNUAL REPORT**  
FOR  
STORM WATER DISCHARGES ASSOCIATED  
WITH INDUSTRIAL ACTIVITIES

---

Reporting Period July 1, 2014 through June 30, 2015

**An annual report is required to be submitted to your local Regional Water Quality Control Board (Regional Board) by July 1 of each year.** This document must be certified and signed, under penalty of perjury, by the appropriate official of your company. Many of the Annual Report questions require an explanation. Please provide explanations on a separate sheet as an attachment. **Retain a copy of the completed Annual Report for your records.**

Please circle or highlight any information contained in Items A, B, and C below that is new or revised so we can update our records. Please remember that a Notice of Termination and new Notice of Intent are required whenever a facility operation is relocated or changes ownership.

If you have any questions, please contact your Regional Board Industrial Storm Water Permit Contact. The names, telephone numbers and e-mail addresses of the Regional Board contacts, as well as the Regional Board office addresses can be found at <http://www.swrcb.ca.gov/stormwtr/contact.html>. To find your Regional Board information, match the first digit of your WDID number with the corresponding number that appears in parenthesis on the first line of each Regional Board office.

**GENERAL INFORMATION:**

**A. Facility Information:**

Facility Business Name: Oyster Point Marina and Park  
Physical Address: Oyster Point Blvd at Marina Blvd  
City: South San Francisco  
Standard Industrial Classification (SIC) Code(s): 4953

**Facility WDID No:** WDED241SO16184

Contact Person: Mr. Robert Hahn  
e-mail: robert.hahn@ssf.net  
**CA** Zip: 94080 Phone: 650-829-6660

**B. Facility Operator Information:**

Operator Name: City of South San Francisco  
Mailing Address: 550 N Canal Street  
City: South San Francisco

Contact Person: Mr. Robert Hahn  
e-mail: robert.hahn.ssf.net  
State: CA Zip: 94080 Phone: 650-829-6660

**C. Facility Billing Information:**

Operator Name: City of South San Francisco  
Mailing Address: 550 N Canal Street  
City: South San Francisco

Contact Person: Mr. Robert Hahn  
e-mail: robert.hahn.ssf.net  
State: CA Zip: 94080 Phone: 650-829-6660

2014-2015  
**ANNUAL REPORT**

**SPECIFIC INFORMATION**

**MONITORING AND REPORTING PROGRAM**

D. SAMPLING AND ANALYSIS EXEMPTIONS AND REDUCTIONS

1. For the reporting period, was your facility exempt from collecting and analyzing samples from **two** storm events in accordance with sections B.12 or 15 of the General Permit?

**YES** Go to Item D.2

**NO** Go to Section E

2. Indicate the reason your facility is exempt from collecting and analyzing samples from **two** storm events. Attach a copy of the first page of the appropriate certification if you check boxes ii, iii, iv, or v.

i.  Participating in an Approved Group Monitoring Plan **Group Name:** \_\_\_\_\_  
\_\_\_\_\_

ii.  Submitted **No Exposure Certification (NEC)** Date Submitted: \_\_\_\_\_

Re-evaluation Date: \_\_\_\_\_

Does facility continue to satisfy NEC conditions?  YES  NO

iii.  Submitted **Sampling Reduction Certification (SRC)** Date Submitted: \_\_\_\_\_

Re-evaluation Date: \_\_\_\_\_

Does facility continue to satisfy SRC conditions?  YES  NO

iv.  Received Regional Board Certification Certification Date: \_\_\_\_\_

v.  Received Local Agency Certification Certification Date: \_\_\_\_\_

3. If you checked boxes i or iii above, were you scheduled to sample **one** storm event during the reporting year?

**YES** Go to Section E

**NO** Go to Section F

4. If you checked boxes ii, iv, or v, go to Section F.

E. SAMPLING AND ANALYSIS RESULTS

1. How many storm events did you sample? 2 If less than 2, **attach explanation** (if you checked item D.2.i or iii. above, only attach explanation if you answer "0").

2. Did you collect storm water samples from the first storm of the wet season that produced a discharge during scheduled facility operating hours? (Section B.5 of the General Permit)

**YES**

**NO, attach explanation** (Please note that if you do not sample the first storm event, you are still required to sample 2 storm events)

3. How many storm water discharge locations are at your facility? 37

4. For each storm event sampled, did you collect and analyze a sample from each of the facility's storm water discharge locations?  YES, go to Item E.6  NO
5. Was sample collection or analysis reduced in accordance with Section B.7.d of the General Permit?  YES  NO, **attach explanation**
- If "YES", **attach documentation** supporting your determination that two or more drainage areas are substantially identical.
- Date facility's drainage areas were last evaluated Dec 2000
6. Were all samples collected during the first hour of discharge?  YES  NO, **attach explanation**
7. Was all storm water sampling preceded by three (3) working days without a storm water discharge?  YES  NO, **attach explanation**
8. Were there any discharges of stormwater that had been temporarily stored or contained? (such as from a pond)  YES  NO, go to Item E.10
9. Did you collect and analyze samples of temporarily stored or contained storm water discharges from two storm events? (or one storm event if you checked item D.2.i or iii. above)  YES  NO, **attach explanation**
10. Section B.5. of the General Permit requires you to analyze storm water samples for pH, Total Suspended Solids (TSS), Specific Conductance (SC), Total Organic Carbon (TOC) or Oil and Grease (O&G), other pollutants likely to be present in storm water discharges in significant quantities, and analytical parameters listed in Table D of the General Permit.
- a. Does Table D contain any additional parameters related to your facility's SIC code(s)?  YES  NO, Go to Item E.11
- b. Did you analyze all storm water samples for the applicable parameters listed in Table D?  YES  NO
- c. If you did not analyze all storm water samples for the applicable Table D parameters, check one of the following reasons:
- In prior sampling years, the parameter(s) have not been detected in significant quantities from two consecutive sampling events. **Attach explanation**
- The parameter(s) is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation. **Attach explanation**
- Other. **Attach explanation**
11. For each storm event sampled, attach a copy of the laboratory analytical reports and report the sampling and analysis results using **Form 1** or its equivalent. The following must be provided for each sample collected:
- Date and time of sample collection
  - Name and title of sampler.
  - Parameters tested.
  - Name of analytical testing laboratory.
  - Discharge location identification.
  - Testing results.
  - Test methods used.
  - Test detection limits.
  - Date of testing.
  - Copies of the laboratory analytical results.

F. QUARTERLY VISUAL OBSERVATIONS

1. **Authorized Non-Storm Water Discharges**

Section B.3.b of the General Permit requires quarterly visual observations of all authorized non-storm water discharges and their sources.

a. Do authorized non-storm water discharges occur at your facility?

YES  NO Go to Item F.2

b. Indicate whether you visually observed all authorized non-storm water discharges and their sources during the quarters when they were discharged. **Attach an explanation for any "NO" answers.** Indicate "N/A" for quarters without any authorized non-storm water discharges.

July -September  YES  NO  N/A      October-December  YES  NO  N/A  
 January-March  YES  NO  N/A      April-June  YES  NO  N/A

c. Use **Form 2** to report quarterly visual observations of authorized non-storm water discharges or provide the following information.

- i. name of each authorized non-storm water discharge
- ii. date and time of observation
- iii. source and location of each authorized non-storm water discharge
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location
- v. name, title, and signature of observer
- vi. **any** new or revised BMPs necessary to reduce or prevent pollutants in authorized non-storm water discharges. Provide new or revised BMP implementation date.

2. **Unauthorized Non-Storm Water Discharges**

Section B.3.a of the General Permit requires quarterly visual observations of all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources.

a. Indicate whether you visually observed all drainage areas to detect the presence of unauthorized non-storm water discharges and their sources. **Attach an explanation for any "NO" answers.**

July -September  YES  NO      October-December  YES  NO  
 January-March  YES  NO      April-June  YES  NO

b. Based upon the quarterly visual observations, were any unauthorized non-storm water discharges detected?

YES  NO Go to item F.2.d

c. Have each of the unauthorized non-storm water discharges been eliminated or permitted?

YES  NO **Attach explanation**

d. Use **Form 3** to report quarterly unauthorized non-storm water discharge visual observations or provide the following information.

- i. name of each unauthorized non-storm water discharge.
- ii. date and time of observation.
- iii. source and location of each unauthorized non-storm water discharge.
- iv. characteristics of the discharge at its source and impacted drainage area/discharge location.
- v. name, title, and signature of observer.
- vi. **any** corrective actions necessary to eliminate the source of each unauthorized non-storm water discharge and to clean impacted drainage areas. Provide date unauthorized non-storm water discharge(s) was eliminated or scheduled to be eliminated.

G. MONTHLY WET SEASON VISUAL OBSERVATIONS

Section B.4.a of the General Permit requires you to conduct monthly visual observations of storm water discharges at all storm water discharge locations during the wet season. These observations shall occur during the first hour of discharge or, in the case of temporarily stored or contained storm water, at the time of discharge.

1. Indicate below whether monthly visual observations of storm water discharges occurred at all discharge locations. **Attach an explanation for any "NO" answers.** Include in this explanation whether any eligible storm events occurred during scheduled facility operating hours that did not result in a storm water discharge, and provide the date, time, name and title of the person who observed that there was no storm water discharge.

	YES	NO		YES	NO
October	<input checked="" type="checkbox"/>	<input type="checkbox"/>	February	<input type="checkbox"/>	<input checked="" type="checkbox"/>
November	<input checked="" type="checkbox"/>	<input type="checkbox"/>	March	<input type="checkbox"/>	<input checked="" type="checkbox"/>
December	<input checked="" type="checkbox"/>	<input type="checkbox"/>	April	<input checked="" type="checkbox"/>	<input type="checkbox"/>
January	<input type="checkbox"/>	<input checked="" type="checkbox"/>	May	<input type="checkbox"/>	<input checked="" type="checkbox"/>

2. Report monthly wet season visual observations using **Form 4** or provide the following information.
  - a. date, time, and location of observation
  - b. name and title of observer
  - c. characteristics of the discharge (i.e., odor, color, etc.) and source of any pollutants observed.
  - d. **any** new or revised BMPs necessary to reduce or prevent pollutants in storm water discharges. Provide new or revised BMP implementation date.

**ANNUAL COMPREHENSIVE SITE COMPLIANCE EVALUATION (ACSCE)**

H. ACSCE CHECKLIST

Section A.9 of the General Permit requires the facility operator to conduct one ACSCE in each reporting period (July 1- June 30). Evaluations must be conducted within 8-16 months of each other. The SWPPP and monitoring program shall be revised and implemented, as necessary, within 90 days of the evaluation. The checklist below includes the minimum steps necessary to complete a ACSCE. Indicate whether you have performed each step below. **Attach an explanation for any "NO" answers.**

1. Have you inspected all potential pollutant sources and industrial activities areas?  YES  NO  
The following areas should be inspected:

- areas where spills and leaks have occurred during the last year.
- outdoor wash and rinse areas.
- process/manufacturing areas.
- loading, unloading, and transfer areas.
- waste storage/disposal areas.
- dust/particulate generating areas.
- erosion areas.
- building repair, remodeling, and construction
- material storage areas
- vehicle/equipment storage areas
- truck parking and access areas
- rooftop equipment areas
- vehicle fueling/maintenance areas
- non-storm water discharge generating areas

2. Have you reviewed your SWPPP to assure that its BMPs address existing potential pollutant sources and industrial activities areas?  YES  NO

3. Have you inspected the entire facility to verify that the SWPPP's site map, is up-to-date? The following site map items should be verified:  YES  NO

- facility boundaries
- outline of all storm water drainage areas
- areas impacted by run-on
- storm water discharges locations
- storm water collection and conveyance system
- structural control measures such as catch basins, berms, containment areas, oil/water separators, etc.

4. Have you reviewed all General Permit compliance records generated since the last annual evaluation?  YES  NO

The following records should be reviewed:

- quarterly authorized non-storm water discharge visual observations
- monthly storm water discharge visual observation
- records of spills/leaks and associated clean-up/response activities
- quarterly unauthorized non-storm water discharge visual observations
- Sampling and Analysis records
- preventative maintenance inspection and maintenance records

5. Have you reviewed the major elements of the SWPPP to assure compliance with the General Permit?  YES  NO

The following SWPPP items should be reviewed:

- pollution prevention team
- list of significant materials
- description of potential pollutant sources
- assessment of potential pollutant sources
- identification and description of the BMPs to be implemented for each potential pollutant source

6. Have you reviewed your SWPPP to assure that a) the BMPs are adequate in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges, and b) the BMPs are being implemented?  YES  NO

The following BMP categories should be reviewed:

- good housekeeping practices
- spill response
- employee training
- erosion control
- quality assurance
- preventative maintenance
- material handling and storage practices
- waste handling/storage
- structural BMPs

7. Has all material handling equipment and equipment needed to implement the SWPPP been inspected?  YES  NO

I. ACSCE EVALUATION REPORT

The facility operator is required to provide an evaluation report that includes:

- identification of personnel performing the evaluation
- the date(s) of the evaluation
- necessary SWPPP revisions
- schedule for implementing SWPPP revisions
- any incidents of non-compliance and the corrective actions taken.

Use **Form 5** to report the results of your evaluation or develop an equivalent form.

J. ACSCE CERTIFICATION

The facility operator is required to certify compliance with the Industrial Activities Storm Water General Permit. To certify compliance, both the SWPPP and Monitoring Program must be up to date and be fully implemented.

Based upon your ACSCE, do you certify compliance with the Industrial Activities Storm Water General Permit?  YES  NO

If you answered "NO" **attach an explanation** to the ACSCE Evaluation Report why you are not in compliance with the Industrial Activities Storm Water General Permit.

**ATTACHMENT SUMMARY**

Answer the questions below to help you determine what should be attached to this annual report. Answer NA (Not Applicable) to questions 2-4 if you are not required to provide those attachments.

- 1. Have you attached Forms 1,2,3,4, and 5 or their equivalent?  YES (Mandatory)
- 2. If you conducted sampling and analysis, have you attached the laboratory analytical reports?  YES  NO  NA
- 3. If you checked box II, III, IV, or V in item D.2 of this Annual Report, have you attached the first page of the appropriate certifications?  YES  NO  NA
- 4. Have you attached an explanation for each "NO" answer in items E.1, E.2, E.5-E.7, E.9, E.10.c, F.1.b, F.2.a, F.2.c, G.1, H.1-H.7, or J?  YES  NO  NA

**ANNUAL REPORT CERTIFICATION**

I am duly authorized to sign reports required by the INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (see Standard Provision C.9) and I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those person directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Title: Senior Civil Engineer

2014-2015  
**ANNUAL REPORT**

***DESCRIPTION OF BASIC ANALYTICAL PARAMETERS***

The Industrial Activities Storm Water General Permit (General Permit) requires you to analyze storm water samples for at least four parameters. These are pH, Total Suspended Solids (TSS), Specific Conductance (SC), and Total Organic Carbon (TOC). Oil and Grease (O&G) may be substituted for TOC. In addition, you must monitor for any other pollutants which you believe to be present in your storm water discharge as a result of industrial activity and analytical parameters listed in Table D of the General Permit. There are no numeric limitations for the parameters you test for.

The four parameters which the General Permit requires to be tested are considered *indicator* parameters. In other words, regardless of what type of facility you operate, these parameters are nonspecific and general enough to usually provide some indication whether pollutants are present in your storm water discharge. The following briefly explains what each of these parameters mean:

**pH** is a numeric measure of the hydrogen-ion concentration. The neutral, or acceptable, range is within 6.5 to 8.5. At values less than 6.5, the water is considered acidic; above 8.5 it is considered alkaline or basic. An example of an acidic substance is vinegar, and a alkaline or basic substance is liquid antacid. Pure rainfall tends to have a pH of a little less than 7. There may be sources of materials or industrial activities which could increase or decrease the pH of your storm water discharge. If the pH levels of your storm water discharge are high or low, you should conduct a thorough evaluation of all potential pollutant sources at your site.

**Total Suspended Solids (TSS)** is a measure of the undissolved solids that are present in your storm water discharge. Sources of TSS include sediment from erosion of exposed land, and dirt from impervious (i.e. paved) areas. Sediment by itself can be very toxic to aquatic life because it covers feeding and breeding grounds, and can smother organisms living on the bottom of a water body. Toxic chemicals and other pollutants also adhere to sediment particles. This provides a medium by which toxic or other pollutants end up in our water ways and ultimately in human and aquatic life. TSS levels vary in runoff from undisturbed land. It has been shown that TSS levels increase significantly due to land development.

**Specific Conductance (SC)** is a numerical expression of the ability of the water to carry an electric current. SC can be used to assess the degree of mineralization, salinity, or estimate the total dissolved solids concentration of a water sample. Because of air pollution, most rain water has a SC a little above zero. A high SC could affect the usability of waters for drinking, irrigation, and other commercial or industrial use.

**Total Organic Carbon (TOC)** is a measure of the total organic matter present in water. (All organic matter contains carbon) This test is sensitive and able to detect small concentrations of organic matter. Organic matter is naturally occurring in animals, plants, and man. Organic matter may also be man made (so called synthetic organics). Synthetic organics include pesticides, fuels, solvents, and paints. Natural organic matter utilizes the oxygen in a receiving water to biodegrade. Too much organic matter could place a significant oxygen demand on the water, and possibly impact its quality. Synthetic organics either do not biodegrade or biodegrade very slowly. Synthetic organics are a source of toxic chemicals that can have adverse affects at very low concentrations. Some of these chemicals bioaccumulate in aquatic life. If your levels of TOC are high, you should evaluate all sources of natural or synthetic organics you may use at your site.

**Oil and Grease (O&G)** is a measure of the amount of oil and grease present in your storm water discharge. At very low concentrations, O&G can cause a sheen (that floating "rainbow") on the surface of water (1 qt. of oil can pollute 250,000 gallons of water). O&G can adversely affect aquatic life and create unsightly floating material and film on water, thus making it undrinkable. Sources of O&G include maintenance shops, vehicles, machines and roadways.

If you have any questions regarding whether or not your constituent concentrations are too high, please contact your local Regional Board office. The United States Environmental Protection Agency (USEPA) has published stormwater discharge benchmarks for a number of parameters. These benchmarks may be helpful when evaluating whether additional BMPs are appropriate. These benchmarks can be accessed at our website at <http://www.swrcb.ca.gov>. It is contained in the Sampling and Analysis Reduction Certification.

ANNUAL REPORT

SIDE A

FORM 3-QUARTERLY VISUAL OBSERVATIONS OF UNAUTHORIZED  
NON-STORM WATER DISCHARGES (NSWDs)

- Unauthorized NSWDs are discharges (such as wash or rinse waters) that do not meet the conditions provided in Section D (pages 5-6) of the General Permit.
- Quarterly visual observations are required to observe current and detect prior unauthorized NSWDs.
- Quarterly visual observations are required during dry weather and at all facility drainage areas.
- Each unauthorized NSWD source, impacted drainage area, and discharge location must be identified and observed.
- Unauthorized NSWDs that can not be eliminated within 90 days of observation must be reported to the Regional Board in accordance with Section A.10.e of the General Permit.
- Make additional copies of this form as necessary.

2014-2015  
**ANNUAL REPORT**  
**FORM 4-MONTHLY VISUAL OBSERVATIONS OF**

**SIDE A**

**STORM WATER DISCHARGES**

- Storm water discharge visual observations are required for at least one storm event per month between October 1 and May 31.
- Visual observations must be conducted during the first hour of discharge at all discharge locations.
- Discharges of temporarily stored or contained storm water must be observed at the time of discharge.
- Indicate "None" in the first column of this form if you did not conduct a monthly visual observation.
- Make additional copies of this form as necessary.
- Until a monthly visual observation is made, record any eligible storm events that do not result in a storm water discharge and note the date, time, name, and title of who observed there was no storm water discharge.

2014-2015  
ANNUAL REPORT

Written Responses

**Item E. 2.** – No. The first rain event (September 25, 2014) occurred outside of facility operating hours. Many outfalls are ordinarily submerged and can only be sampled at low tide. Some analyses have short hold times and so samples cannot be collected on a Friday due to laboratory operating hours. Sampling events are performed at times when there is both discharge and low tide during facility operating hours and not on Fridays.

**Item E. 5.** – Yes. A field survey of storm water outfalls at the Oyster Point Marina and Park was completed in December 2000. There are a total of 37 surface water drainage outfalls at the former landfill, as shown on Figure 1. Of these, 10 are considered to be major outfalls because they drain relatively large areas. The 10 major outfalls are identified as numbers 2, 3, 9, 16, 24, 27, 28, 29, 30 and 34.

The 10 major outfalls drain six discrete areas of the former landfill: the west basin parking area, the east basin parking area, the maintenance yard parking area, the existing hotel and office complex, Marina Blvd., and undeveloped open space. Storm water from the 10 outfalls is composited into representative samples from these six areas as follows:

Outfalls 2 and 3	The east basin parking and maintenance yard areas
Outfall 9	The eastern portion of Marina Blvd.
Outfall 16	Undeveloped open space
Outfalls 24 and 27	The western portion of Marina Blvd.
Outfalls 28 and 29	Existing hotel and office complex
Outfalls 30 and 34	The west basin parking area

Outfall 16 drains a large grassy area on the southeastern end of the former landfill. Based on observations made, the area generates little to no runoff. In addition there are no industrial activities conducted in this portion of the former landfill. The area is open space and contaminants are not expected. Outfall 16 was therefore eliminated from the storm water sampling program as outlined in Addendum 1, dated August 2001, to the September 2000 Storm Water Pollution Prevention and Monitoring Plan.

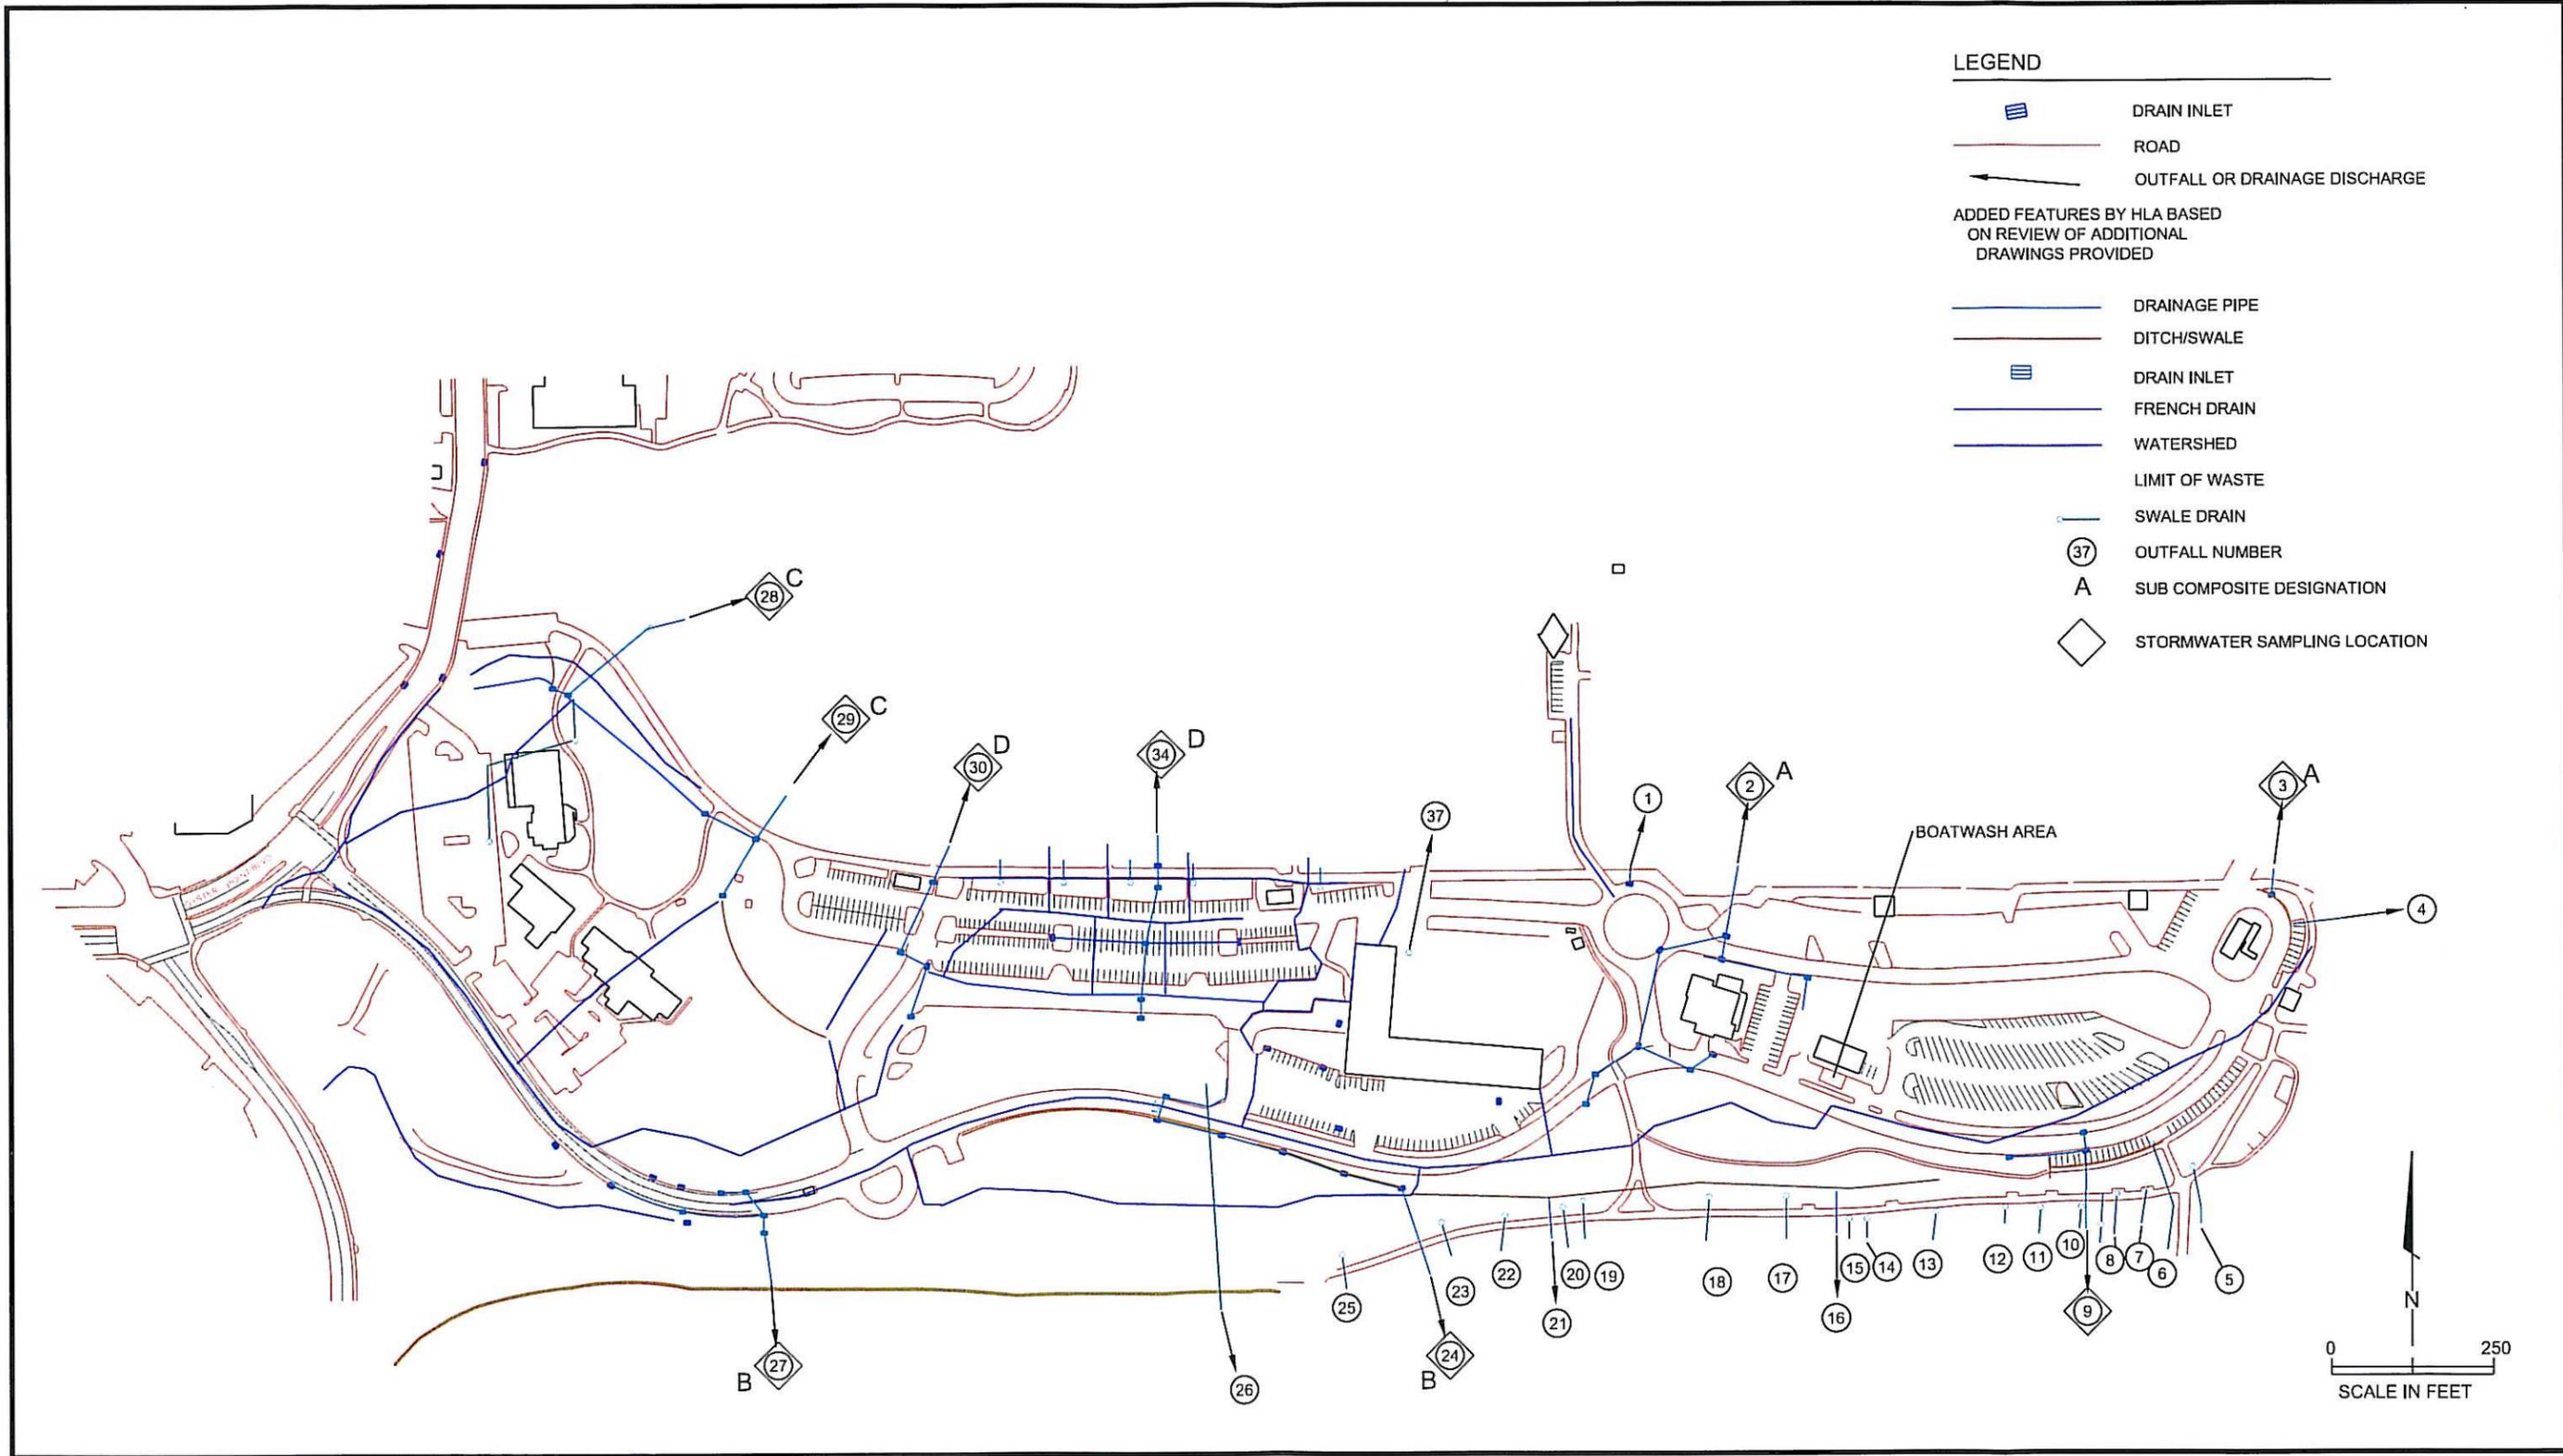

**Item E. 6.** – No. Sample collection activities were all started as soon as possible after the storm event began during facility operating hours; however, it takes several hours to collect all samples and most must be collected during low tide (see Item E. 2.).

**Item E. 7.** – No. The December 2 event storm began on Sunday November 30 (non-facility operating day) with little to no rain on Monday, December 1.

**Item E. 10.** – The analytical program includes constituents included in the General Permit, Table D and in RWQCB Order 00-046. All parameters listed in Table D for

landfills and water transportation facilities were analyzed. In 2004, the City eliminated analysis for SVOCs and VOCs, which are included in the Order, because they had historically not been detected or were not detected in over two years of monitoring storm water events. The SWPPP was modified to eliminate SVOCs and VOCs from the program.

**Item E. 11** The analytical results from the two stormwater sampling events are summarized on attached Form 1. Nitrate nitrogen was found at concentrations exceeding the EPA benchmark value of 0.75 mg/L in 8 of 10 samples. Chloride was found in 1 of 10 samples at a concentration above its benchmark of 860 mg/L. Aluminum was found in 4 of 10 samples at a concentration above its benchmark of 750 ug/L. Most monitored outfalls include at least some drainage from landscaped areas and the presence of nitrate nitrogen may be associated with fertilizers. The City has reported these detections with the Harbor District who maintains landscaping for their evaluation of the fertilizer application.
